Lamb, K. N., Boedeker, P., & Kettler, T. (2025). Measuring creative self-efficacy: Instrument development and validation. *Thinking Skills and Creativity, 56*, Article 101738. https://doi.org/10.1016/j.tsc.2024.101738

Defining the Construct:

Creative self-efficacy (CSE) is a type of creative self-belief – an individual's convictions related to their creative abilities. – which reveals why, how, and what an individual create; these beliefs also reveal why an individual chooses not to create. In other words, CSE describes an individual's belief about their creative ability. CSE along with other creative self-beliefs (e.g. creative metacognition, creative self-concept) mold an individual's creative identity. Moreover, these beliefs play a pivotal role in how individuals engage creatively and assess their own ability to be creative.

Directions:

On this scale, respond to each item based on how you are currently, not how you wish to be.

Response Categories:

1 – Very Strongly Disagree
2 – Strongly Disagree
3 – Disagree
4 – Neither Disagree nor Agree
5 – Agree
6 – Strongly Agree
7 – Very Strongly Agree

Scale Items:

1. I feel comfortable completing creative tasks.
2. I feel that I am good at innovation and design.
3. I am confident in my ideas even when they are unpopular.
4. If something looks too complicated, I can easily develop innovative solutions.
5. When given creative projects/tasks, I do not give up easily.
6. I think I am more creative than my peers.
7. I am confident I can perform creative tasks as well or better than others at work or in class.
8. I am confident in my ability to lead a creative team.
9. I pursue my creative ideas even after experiencing failure or rejection.
10. I do not give up on my creative ideas.

11. I share my creative ideas with others even after receiving negative feedback from my boss or teacher.
12. I can confidently discuss my creative ideas to experts or professionals.
13. When working on group projects, I am good at generating unique ideas and solutions.
14. I can be creative in a variety of settings.
15. I can confidently present my ideas to experts or professionals.
16. I can come up with novel ideas in multiple areas/disciplines.
17. After experiencing setbacks, I present my innovation products anyway.
18. I can confidently perform creatively in front of an audience.
19. I am good at coming up with a lot of different ideas.
20. I feel confident presenting ideas, inventions, and/or designs to peers.

Scoring:
All items are scored positively (no reverse scored items) on the 1 to 7 scale of agreement. Thus, the potential score range is 20 to 140. Alternatively, you may obtain a total score between 20 and 140 and divide by 7 to interpret the overall mean score across all items.

The scale is a single factor score measuring creative self-efficacy. Higher scores indicate the individual or group has stronger creative self-efficacy.

Population:
The scale's initial structural validity was derived from 1,731 university students with a mean age of 25 years. The sample was more female than male and mostly white. The sample was drawn from Texas in the United States.
