Self-reflection and Insight Scale: Short Form

Self-Reflection

- I frequently examine my feelings
- I frequently take time to reflect on my thoughts
- I often think about the way I feel about things
- It is important to me to evaluate the things that I do
- I am very interested in examining what I think about
- It is important to me to try to understand what my feelings mean

Insight

- I'm often confused about the way that I really feel about things (R)
- I'm often aware that I'm having a feeling, but I often don't quite know what it is (R)
- My behavior often puzzles me (R)
- Thinking about my thoughts makes me more confused (R)
- Often I find it difficult to make sense of the way I feel about things (R)
- I usually know why I feel the way I do

Notes

- Items flagged with (R) should be reverse scored.
- The original SRIS was used with a 6-point response scale, although researchers have used alternatives. Most research with the short SRIS has used a 7-point scale (1 = *strongly disagree*, 7 = *strongly agree*).
- I recommend presenting the items in a random order.

Original Scale:

Grant, A. M., Franklin, J., & Langford, P. (2002). The self-reflection and insight scale: A new measure of private self-consciousness. *Social Behavior and Personality*, *30*, 821–836.

Short Form:

Silvia, P. J. (2020). The Self-Reflection and Insight Scale: Applying item response theory to craft an efficient short form. *Current Psychology*.
